# ADDITIONAL FEATURES

EVALARM – "SOS Alarm"
In emergency situations every second counts and can potentially make the crucial difference. With the help of the "SOS Alarm" module, numerous helpers can be notified simultaneously. The geolocation of the endangered person or victim is transferred and constantly updated. Additionally, a call to a previously configured phone number is established automatically.

**EVALARM – "Dead Man's Handle"**
The "Dead Man's Handle" module is another functional expansion of EVALARM. It uses modern smartphone technologies (e.g. motion sensors).
Users have to confirm their status within 15 minutes either manually or via movement. Otherwise the module will trigger a SOS Alarm with the corresponding geo-location and alerts the preconfigured persons.

EVALARM®

*The Digital Alert
and Emergency Platform*

ARE YOU PREPARED?

Emergencies and technical alarms can only be managed successfully if all the responsible parties can receive the latest relevant information simultaneously and as quickly as possible. That way people can act in a purposeful and reliable fashion.

Goals

- Targeted, reliable and qualified alerting for all appropriate personal
- Everybody knows what to do as well as when and where to act accordingly
- All responsible individuals have a firm grasp of the situation at all times

Everything goes as planned!

EV(A)LARM®

FEATURES

"More than a simple alert"

Alerting:

Mobile alerting, Link-up with various alarm interfaces, Alarm levels, Additional information, bi-directional updating, accepting and declining alarms.

Contact Lists:

Mobile access to all relevant contact information in case of an alarm.

Task Lists:

Task lists for specific user / groups, Synchronization of task status in real-time.

Documents and Building Plans:

Mobile access to all relevant emergency documents, central management and updating, automatic selection of correct building plans (e.g. routing cards).

Evacuation:

Clearing a building with the help of evacuation lists, Mobile processing of these evacuation lists, Missing-persons function, Real-time synchronization.
