

1.5 Alarm Archive

All completed alerts and info-messages are automatically moved after 12 hours from the **cockpit** to the **alarm archive**.

Here you can view the complete alarm history of each alarm and generate an **alarm report** for each.

For a better overview, you can filter the archive according to alarm types, limit the alarms displayed using the time filter, or search for specific alarms using the search function.

If there were alarms from externally linked locations, you can find them under the "External Alarms" tab.
