EVALARM Update Autumn 2018

Dear Customers and Partners,

we like to inform you about our optimizations we updated in the system.

Accompanied to our innovations, the Terms of Use also got updated. As usual you can find these after logging in and directly in the services.

The update will be rolled out in two steps. Between the 22th and 23th of october 2018 we are going to update the backend togehter with the Applications (iOS + Android), which will be available a few days later. In the second update on the 31st of october 2018, the rest of the new functions in the Web-Interface are going to be updated.
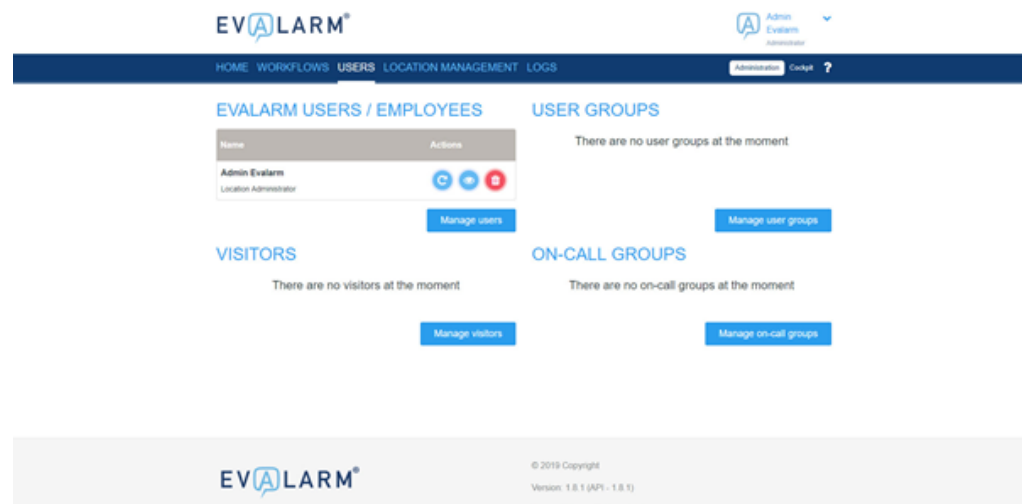

With the update we wanted to make EVALARM much more clearly and flexible.

UI Optimazations Web-Interface

The interface in the sector Workflows is redesigned, so you can find the important functions more faster.

Also you can find now on-call groups in the sector Users.

Limited Administration-Permissions

In the Location Management under Permissions now it is possible for Administrators to give specific users, who have not the user role Administrator, access to Worflows, Users and Location Management.

Structure for specific Alarm Types

Furthermore you have the possibility to reduce the structure to specific alarm types. As a result the clarity in an active alarm gets improved, so you only get the information shown, which are relevant for the specific scenario.

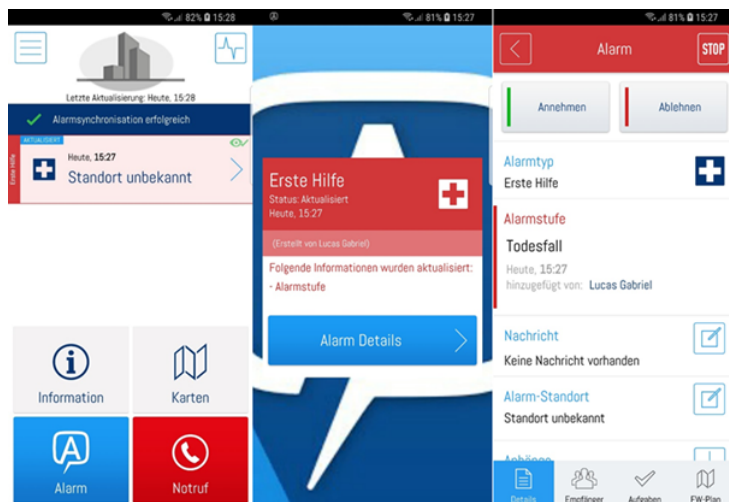

Logs

Also the export of the logs was reworked, so you can find the relevant informations about what happend, maxium three months ago, more faster.

Improved clearity for updated alarms

- Update details in PUSH and alarm details

- Name of alarm type next to the alarm icon

- Updates in list of alarms visible

- Counter of unread alarms at some producers as of Android 8.0

- Integration of new PUSH function as of Android 8.0

Further new functions and improvements

- Accessibility of the alarm archive

- No alarm sounds for the trigger person

- Lowering of the alarm sound volume to 10% while calling

- Clickable Emails, phone numbers and weblinks in documents

- Quickalarm is now connected to message function

- New accessibility to alarm archive

- Cancelling of the function „Please inform me about connecting problems", because a lot of the users didn't turned off the battery optimization

- Improved error display of connecting problems

- Several stability improvements

- Fix of several bugs

We hope you like the improvements. Gladly give us feedback to feedback@evalarm.de.

Thank you for your confidence and we wish you a lot of success with EVALARM.

Your EVALARM Team
