A. Object Security

Below we would like to show an example of how easy it is to carry out a control tour.

In the example below, we assume that we have 2 inspection rounds with a customer (test.kunde1), each with 2 inspection points.

For this purpose, we create 2 alarm types "inspection tour early" and inspection tour "evening".

The inspection tour is started manually by the security staff.

(There is the possibility to start a tour of inspection, by scanning an NFC tag or manually).

Location (login)	Object	Name Guard Tour	Sort Key Guard Tour	Brief description Guard Tour	Name Control Point	Sort Key Control Point	Instructions (Tasks)	Scan	Scan-ID
test.customer1	Object	guard tour morning	100	guard tour morning	guard tour morning	100	Please open all office rooms.	NFC	1
test.customer1	Object	guard tour morning	100	guard tour morning	guard tour morning	95	Please check in the basement that the archive is locked.	NFC	1
test.customer1	Object	guard tour evening	95	guard tour evening	guard tour evening	100	Please lock all offices	NFC	1
test.customer1	Object	guard tour evening	95	guard tour evening	guard tour evening	95	Please check that the fence is undamaged and there is no rubbish lying around.	NFC	1
test.customer2	Object	guard tour noon	100	guard tour noon	guard tour noon	100	Please check that the fence is undamaged and there is no rubbish lying around.	NFC	1
test.customer3	Object	guard tour evening	95	guard tour evening	guard tour evening	95	Please lock the yard gate.	NFC	1

A security inspection tour is simply created in the following steps:

With EVALARM Security you can use different alarm types for different events.
We have already pre-installed the "Inspection Revierdienst" alarm type. We still want to show you how to configure it.

1. Creation of the alarm type "inspection tour" (already preconfigured)
2. Creation of the inspection tour, checkpoints and test instructions
3. Linking customers and checkpoints
4. Reading the codes (NFC, QR, barcode)
5. Optional: scheduling inspection tour

Below we show you how easy it is to set up a control tour in 5 minutes.

If you wish, we would be happy to set up the inspection tours for you! No matter how many checkpoints and checkpoints! For this we provide you with an Excel template to fill out.

step	comments	video
1. Create alarm type "inspection tour" (already pre-installed)	With EVALARM Security you can use different alarm types for different events. We have already pre-installed the "Inspection object protection" alarm type. We still want to show you how to configure it. Duration: 0:58 minutes	Your browser does not support the HTML5 video element
2. Create inspection tour and points with test instructions	First, a task list (inspection tour) with the associated tasks (inspection instruction) is created for each customer. You can (optionally) add a document to each control point (task), which is then available to the user when the task is completed. Create 1 inspection tour with 2 inspection points / Duration: 1:17 minutes	Your browser does not support the HTML5 video element
3. Create process for inspection tour	When we have created the checkpoints, we link them to the "early checkout" alarm type and determine the user group or role that should carry out the checkpoint. Duration: 0:56 minutes	Your browser does not support the HTML5 video element

4. Read in the NFC ID	You can easily read in NFC tags, QR and barcodes using the mobile app. In the Checkpoint management you can create new control points completely and assign them to certain task lists / tours. You can also edit existing checkpoints at any time. ⚠️ Note: Reading NFC tags is only possible via smartphone via Android! All users with the user role Administrator have access. In addition, users with the user roles Emergency and Crisis Team Leader & Emergency and Crisis Team Employees can also use the Checkpoint management if they have additionally been granted access to the Checkpoint management. Duration: 0:48 minutes	Your browser does not support the HTML5 video element
5. Scheduling inspection tour	We can automate and plan the start of an inspection tour. In the example, we would like the "inspection tour early" to start at 6 a.m. Duration: 0:41 minutes	Your browser does not support the HTML5 video element
