

# 4.6 User health check

For transparent checking of the status of your users, you have the option of exporting a **user health check** as Excel in the **user administration**.

This gives you an overview of the "online status" of your users on your EVALARM location so that they can receive push notifications of the alerts.

To do this, go to the corresponding button in the user overview. The export is then generated in the background. After a few seconds you will need to reload the page once so that the download link is available to you.

In the export you can see all the relevant data about your users (first name, last name, email, ID, user role), which user and/or on-call groups they are in and whether you are logged in. If the users are logged in, they can also see which client they are logged in with (web, Android app or iOS app).

First name	Last name	Email	Internal ID	Role	User groups	On-call groups	Logged in?	Device
Admin	Groupkom	admin@groupkom.de	0000000000000000	Administrator	Groupkom		No	Android, Web
Admin	EVALARM			Administrator			No
